Subject FYI on Park City

I just wrote an approval letter for the Park City "EMS" - which is basically a comprehensive plan for improving the Prospector Square Soil Ordinance. UDEQ concurs. This was several years and work groups in the making. The plan means better community awareness, free voluntary blood lead testing, formal notice and disclosure to buyers in real estate transactions, mandatory implementation as opposed to voluntary, frequent retesting of yards to ensure continued efficacy, tracking of dirt that is removed, etc. etc. Much future management could have been avoided with a blood lead study, but Park City wanted no part of that, so we compromised. I think this will probably be one of the best institutional controls in the country.

Once data begins to come in from compliance sampling and all aspects are implemented, we will archive Silver Creek Tailings (Prospector Square) from CERCLIS! This is a huge step for closing out Superfund efforts in Park City.
